Roche expands HIV Global Access Program to include EID testing

Program expands access to care through special pricing

Roche recently launched the Global Access Program for HIV viral load testing which expands access to diagnostic testing. Roche supports the UNAIDS 90:90:90 goal and the Diagnostics Access Initiative by expanding access to testing through affordable pricing to those countries hardest hit by the disease. The Program, in partnership with UNAIDS, CHAI, PEPFAR, and the Global Fund on a new Global Access Program for HIV viral load testing was launched at the 69th UN General Assembly. Through this program, Roche is providing special access pricing on the COBAS® AmpliPrep/COBAS® TaqMan® HIV-1 Test version 2.0 for qualifying organizations in eligible countries.

In July 2015, during the 8th IAS Conference on HIV Pathogenesis, Treatment and Prevention in Vancouver, British Columbia, Canada, the announcement was made to expand the program to include early infant diagnosis

Country List

Low Income Countries

Afghanistan
Bangladesh
Benin
Burkina Faso
Burundi
Cambodia
Central African Republic
