Integrated Point of Care Solutions

Delivering operational excellence at the Point of Care (POC)

→ **As your decentralised networks grow,
so does your need for quality control and standardisation**

Every day, POC Coordinators need to stay ahead of rapidly evolving patient demands, cost pressures and regulatory requirements. When you bring testing directly to your patients and expand your decentralised network, additional challenges from managing disparate data sources may arise:

Devices

Diverse locations, manufacturers and testing domains

People

Non-standardised management and training of remote operators

Data

Issues with data integration and digital transformation

→ **Questions we understand that you face daily**

"How can I enable a secure, compliant and robust integrated decentralised POC network?"

"How can I be more efficient and coordinate operator and device management centrally?"

"How can I grow my POC service beyond the hospital walls, while ensuring governance, easy reporting and consistent quality?"

"How can I evolve my testing capabilities and unlock data insights to future-proof my POC service?"
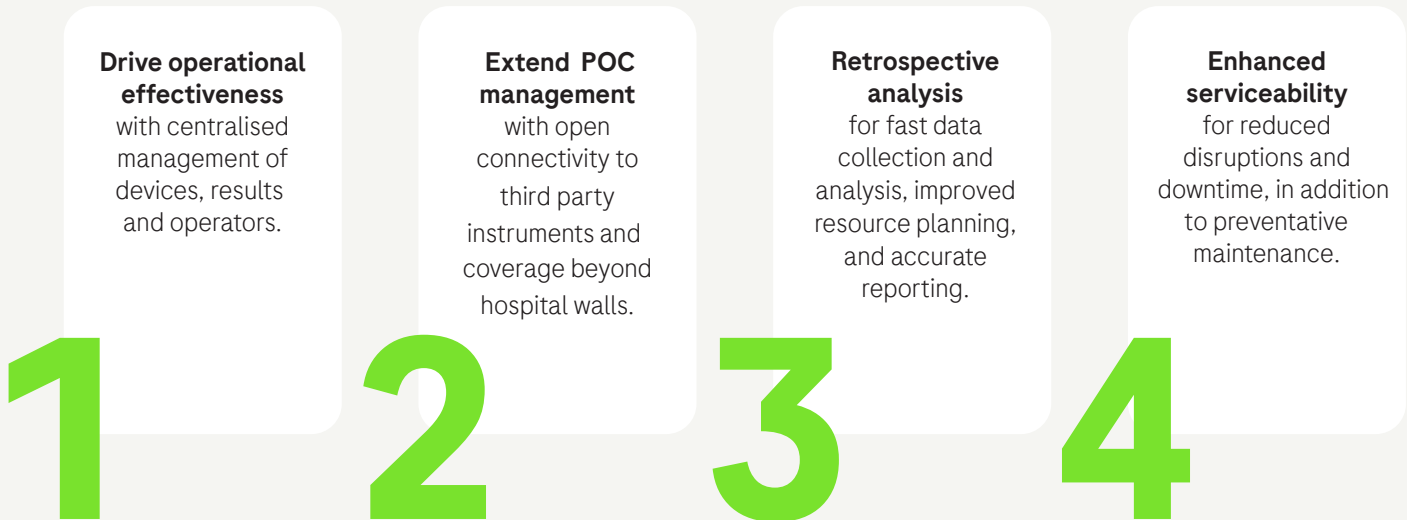

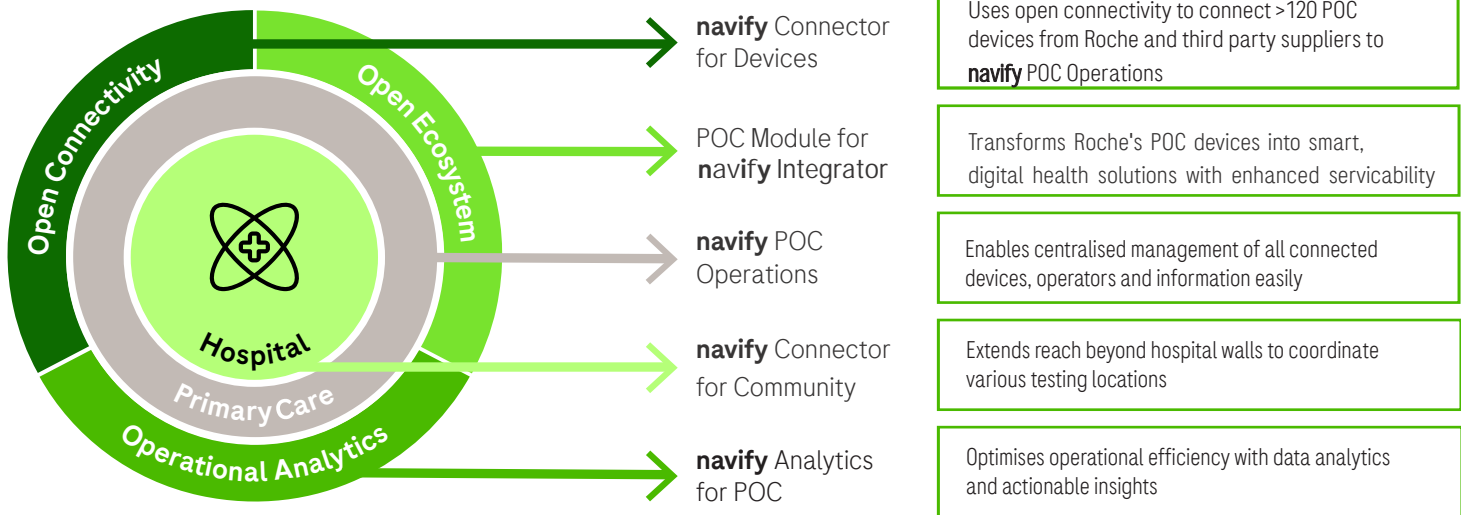

**We have the tools to help you fortify your POC service
and scale operations as your goals and needs change.**

Empowering you to build an intelligent POC network with navify®

Our portfolio of integrated **navify** solutions drive digital transformation at every touchpoint of your POC network and improve operational efficiency across settings.

Point of Care Digital Solutions from Roche

Precise – Efficient – Connected

navify Connector for Devices

Uses open connectivity to connect >120 POC devices from Roche and third party suppliers to **navify** POC Operations

POC Module for **navify** Integrator

Transforms Roche's POC devices into smart, digital health solutions with enhanced servicability

navify POC Operations

Enables centralised management of all connected devices, operators and information easily

navify Connector for Community

Extends reach beyond hospital walls to coordinate various testing locations

navify Analytics for POC

Optimises operational efficiency with data analytics and actionable insights

---

Drive operational effectiveness with centralised management of devices, results and operators.

1

Extend POC management with open connectivity to third party instruments and coverage beyond hospital walls.

2

Retrospective analysis for fast data collection and analysis, improved resource planning, and accurate reporting.

3

Enhanced serviceability for reduced disruptions and downtime, in addition to preventative maintenance.

4

Providing you the tools to build compliant, scalable and ever-evolving POC networks, while helping your patients get the answers they need. when they need them.

For healthcare professional use only in the UK and Ireland. Not for distribution.
