

Flu Test & Treat Community Pathway

Winter pressures faced by the NHS are often exacerbated by cases of seasonal influenza. A collaborative working agreement between Innovation Agency, Roche Products Limited and Roche Diagnostics Limited aimed to demonstrate through a pilot whether using rapid diagnostics for Flu A/B alongside digital reporting in the community could improve patient outcomes, reduce the need for hospitalisations and therefore reduce the burden on secondary care, whilst identifying any further system benefits.

What happened?

- Between December 2022 and March 2023, 9 GP practices¹ in Yorkshire and the North West took part in a pilot for a new flu patient community pathway using a point of care test
- A target population of around 43,000 clinically at-risk patients were encouraged to visit their GP to take a flu test upon developing flu symptoms
- Based on national averages for flu surveillance,² an estimated 17 hospitalisations, 4 deaths, and 1 ICU admission were avoided due to the pilot
