

TOUCHPOINTS | Keeping you informed so you can care with confidence.

ALL SYSTEMS GO

See how you can take action to ensure a seamless POC system.

PRODUCTIVITY POWER

Keep the data flowing.

Flexibility. It's good for efficiency and your patient's health.

Keeping information flowing is key to successfully treating patients. If you can't get a patient's blood glucose results to the right people at the right time, fast and accurate testing will make far less of an impact. It's why we've designed the Accu-Chek Inform II system with flexible configurations for enhanced connectivity and easy network integration. Simply choose the configuration that's right for you - wired, wireless or a combination of both.

Our system connects to existing point of care (POC) data management systems, including the **cobas**® IT 1000 from Roche or other third-party data management systems. Plus, with optional meter-level wireless technology, you can automatically transfer patient data without docking the meter. It's flexibility that keeps information and patients on track for improved care.

PRODUCTIVITY POWER

Study Update:

Study sites are active and more coming onboard!

We heard loud and clear that you want to stay informed regarding the progress of our Inform II "Critically Ill" Study. We are excited to share that since the first patient sample collection in the summer of 2017, we now have multiple sites actively collecting samples. Additionally, we are working to partner with several more sites to further accelerate the rate of sample collection to include all targeted patient populations.

It continues to be a priority to expand existing claims so the Accu-Chek Inform II system can be used with all appropriate patients throughout the hospital, including "critically ill" patients.

We continue to work with the greatest sense of urgency for our 510(k) submission for clearance. We'll continue to keep you posted on our progress.
